

Barningham Energy Supply – Let's Take Control!

Would you like to reduce your electricity and oil costs?

Are you concerned about climate change and pollution from burning oil?

Would you like to make energy efficiency improvements to your house to reduce your energy costs?

Would you like to explore options for installation of renewable energy supplies in Barningham?

Please join us at Barningham Village Hall on:

**Tuesday 19th November at 7:30pm for
Presentation on potential for Barningham Energy Supply
as a Parish Meeting agenda item.**

A Barningham group (Parish Council, Village Hall, combination or other) can apply for funding from the Rural Communities Energy Fund (RCEF):

- £40,000 for a Phase 1 Feasibility study for a renewable energy project (***no risk for residents!***)
- £100,000 for a Phase 2 Detailed design, business development and planning application

The aim is to install energy generating assets:

- owned by the community,
- supplying energy direct to the community and
- providing surplus income that can be used to fund on-going energy efficient improvements.

Creation of a community woodland to absorb residual emissions and provide wood for village use could be an additional element of the scheme.
